Steadily lighted in Seawater for 72 hours No obvious change Serious atomization on the surface strip can reach to IP67, high resistance to acidic alkali and salt properties Thermal conductivity Good thermal conductivity No thermal conductivity Pvc and epoxy cannot conduct heat, while silicone has good	Colloid features in 180°C	•	brown and some melted	hydrolyzed, Viscosity becomes
Thermal conductivity Good thermal conductivity heat, while silicone has good		No obvious change		strip can reach to IP67, high resistance
	Thermal conductivity		No thermal conductivity	heat, while silicone has good

Product features

- Anti-yellowing and heat resisting silicone glue, chemical resistance acid and alkaline, available for extremely terrible outdoor environment.
- Uniform and soft luminance, no light spot.
- · Super brightness large chip, golden wire welded and copper led holder for quicker heat dissipation, higher stability, longer life span.
- Leadless SMT technique (RoHS certificated), smooth welding joint, firm connection of led and pcb.

Driver & Cotronller

Order code: XLG-150-24-A AC100-305V DC24V 150W IP67, Global certification. Non Dimmable.

10V PWM signal and resistance.

Order code: ELG-150-24DA AC100-305V DC24V 150W IP67, Global certification Dali control technology.

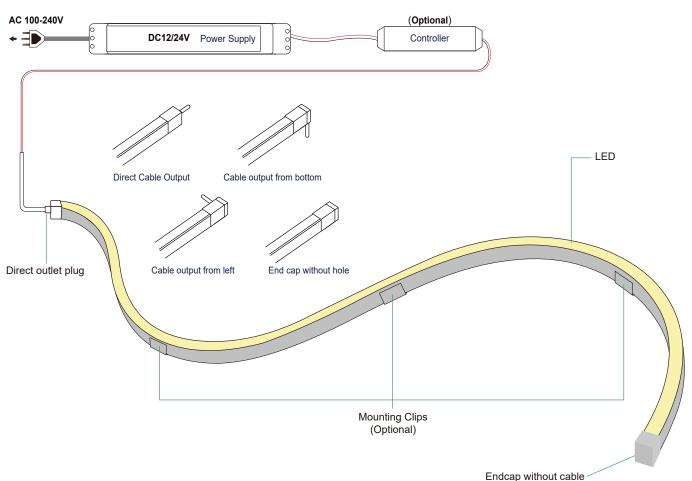

Order code: ELG-150-24DA AC100-305V DC24V 150W IP67, Global certification Dali control technology.

Dimmer:1 Channel DC12V/24V, 6A, Dimmer, RF remote with finger touch ring.

Product system solutions

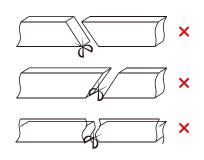

Cut mark

Remarks: There is a transparent window at the bottom of the light strip,

Make precise vertical cuts at the exact cut position of the light strip.

Please do not arbitrarily cut or cut into a bevel and arc section.

Installation

This product is suitable for surface mounting or embedded sealing installation. Recommended slot size: Width 10mm, Depth 10mm, gently press the neon sleeve into the slot.

Installation of carrier

ShenZhen Surmountor Lighting Co., LTD

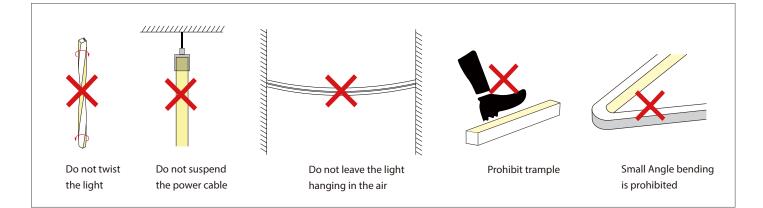

C TEL: +86-0755-27926119/27926326

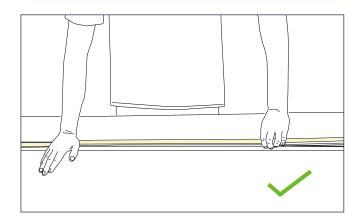

Cautions

- Please notice that the strips are not bendable to all directions. As the appropriate specific shape and degree, please follow the following instruction.
- LED strips are low voltage products, you must use the power supply (transformer). Please don't connect the led strip directly to the AC 110V or AC 220V. Otherwise, it will burn out the LED strips and lead to safety (security) accidents.
- Please read the specifications thoroughly before installation by professional staff to make sure the safe use.

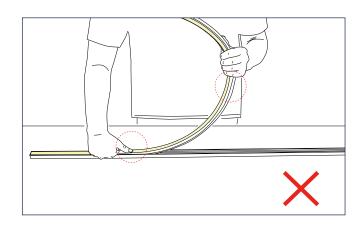

Wrong bending way

Correct bending way

- Please press the led strip with your palm to slowly insert the led strip into the groove, and gently straighten the led strip above the groove with your right hand.
- Try to keep the led strip in a flat state during the installation process.

- Do not press the led strip with a single finger, it is easy to damage the internal parts of the led strip.
- The bent arc of the led strip should not be too large during installation.

Installation Precautions -- Side Mounted

(If the length of the light is more than 2 meters, two persons must work together to install it.)

1.Installer:

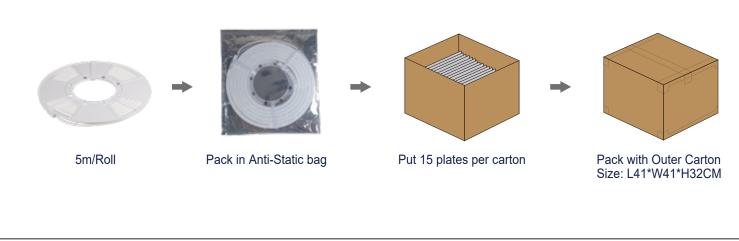

- Press the light with the palm of the left hand to slowly load it into the slot. Straighten the light with right hand, hold it and rotate it 90° to droop it in the direction of your hand. See Figure 1.

- Do not bend the luminous surface to the side. See Figure 2.

2. Assistant:

- Cooperate with the installer to lift the reel of the light, and then slowly deliver the light to installer. Do not pull or twist the light during the installation.
